

# PRODUCTION MANAGEMENT ZONE REPORT

Created: 9/24/2018

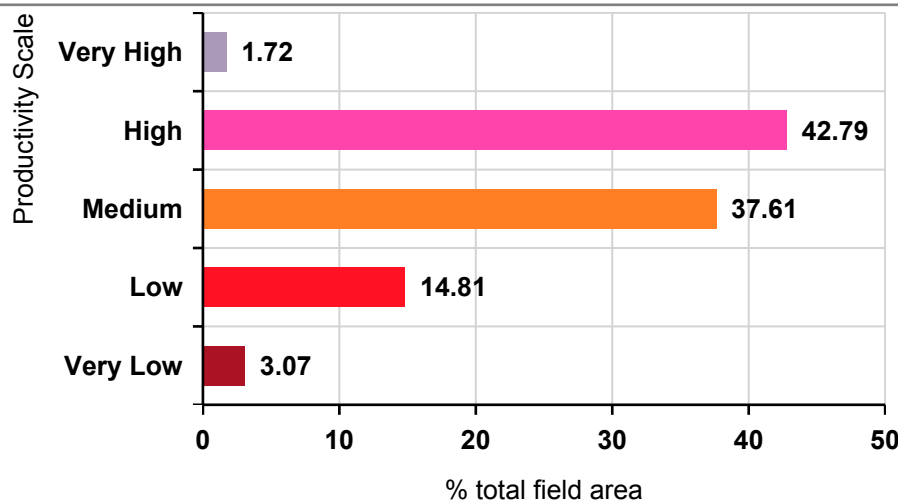

Farm: 110  
 Field: 110  
 Field Size: 204.2 ha  
 Crop: CORN  
 Variety: Craft

## Field information and statistics

Field information and statistics	
Overall field variability	Medium
Most variable zone over the field	5
Most uniform zone over the field	2

Field Productivity

### Description:

The SAMZ map represents the cumulative variability of the field derived from multiple crop seasons with satellite imagery. The variability within the field may be a result of weather conditions, management, biotic pressure, crop types or water drainage patterns. This process is then used to generate discrete production management zones that can inform your future crop planning.
