COVID-19 Risk

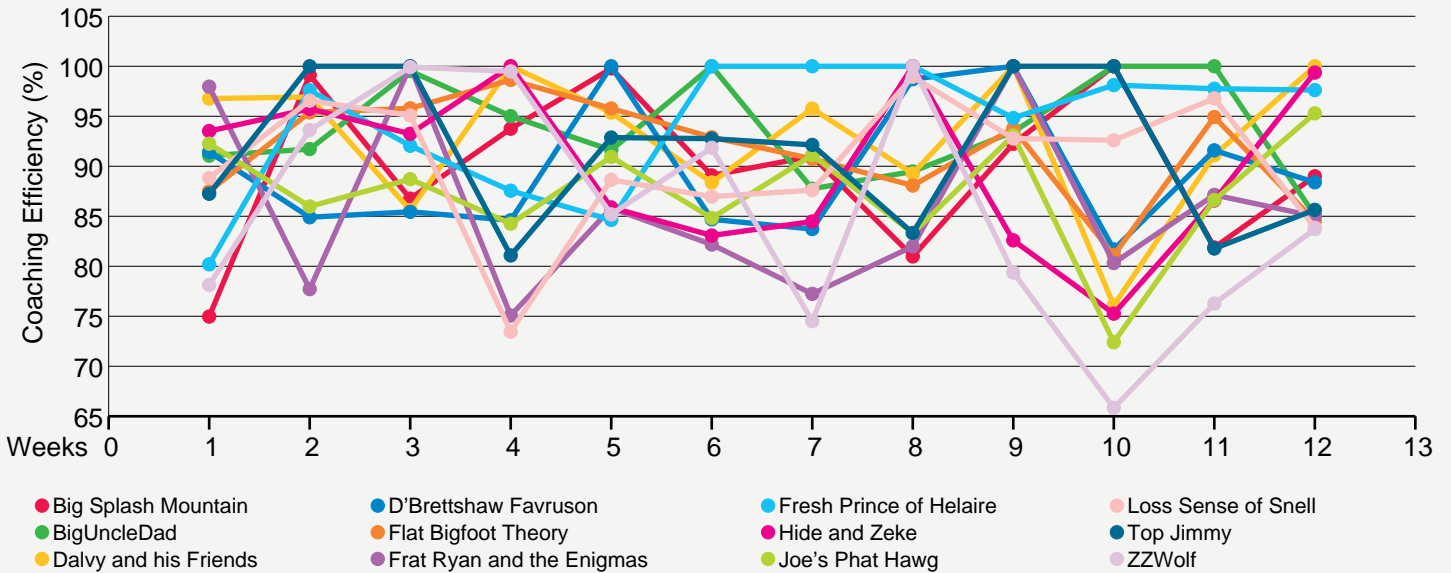

Team COVID-19 Risk is calculated based on the cumulative COVID-19 risk of all players on that team's starting lineup. Each player is evaluated against both their own and their teammates' appearances on the NFL's Reserve/COVID-19 list and how recently those appearances occurred.

Appendix I: Rankings & Metrics

League Standings

Overall standings for the chosen week. Dynamically adjusts information based on whether a league uses only waivers or has a FAAB (free agent acquisition budget). Data marked with an asterisk ("*") means that due to limitations of whichever fantasy platform API is being used, the available information is incomplete in some way.

Playoff Probabilities

Predicts each team's likelihood of making the playoffs, as well as of finishing in any given place. These predictions are created using Monte Carlo simulations to simulate the rest of the season over and over, and then averaging out each team's performance across all performed simulations. Currently these predictions are not aware of special playoff eligibility for leagues with divisions or other custom playoff settings.

League Median Matchup Standings

Overall "against the median" league standings. Every week the median score is calculated across all teams, and every team plays an extra matchup versus the league median score. Teams earn an additional win/loss/tie based on how their score matches up against the league median. Median standings are ranked by "Combined Record" (most wins, then fewest losses, then most ties), and use "Season +/- Median" (how many total points over/under the median teams have scored on the season) as the tie-breaker.

Team Power Rankings

The power rankings are calculated by taking a weekly average of each team's score, coaching efficiency, and luck.

Team Z-Score Rankings

Measure of standard deviations away from mean for a score. Shows teams performing above or below their normal scores for the current week. See [Standard Score](#). This metric shows which teams overperformed or underperformed compared to how those teams usually do.

Team Score Rankings

Teams ranked by highest score. If tie-breaks are turned on, highest bench points will be used to break score ties.

Team Coaching Efficiency Rankings

Coaching efficiency is calculated by dividing the total points scored by each team this week by the highest possible points they could have scored (optimal points) this week. This metric is designed to quantify whether manager made good sit/start decisions, regardless of how high their team scored or whether their team won or lost.

If tie-breaks are turned on, the team with the most starting players that exceeded their weekly average points is awarded a higher ranking, and if that is still tied, the team whose starting players exceeded their weekly average points by the highest cumulative percentage points is awarded a higher ranking.

Team Luck Rankings

Luck is calculated by matching up each team against every other team that week to get a total record against the whole league, then if that team won, the formula is:

$$\text{luck} = (\text{losses} + \text{ties}) / (\text{number of teams excluding that team}) * 100$$

and if that team lost, the formula is:

$$\text{luck} = 0 - (\text{wins} + \text{ties}) / (\text{number of teams excluding that team}) * 100$$

This metric is designed to show whether your team was very "lucky" or "unlucky", since a team that would have beaten all but one team this week (second highest score) but lost played the only other team they could have lost to, and a team that would have lost to all but one team this week (second lowest score) but won played the only other team that they could have beaten.

Team Optimal Score Rankings

Teams ranked by highest optimal score.

Bad Boy Rankings

The Bad Boy ranking is a "just-for-fun" metric that pulls NFL player arrest history from the [USA Today NFL player arrest database](#), and then assigns points to all crimes committed by players on each team's starting lineup to give the team a total bad boy score. The points assigned to each crime can be found [here](#).

Beef Rankings

The Beef ranking is a "just-for-fun" metric with a made-up unit of measurement, the "TABBU", which stands for "Trimmed And Boneless Beef Unit(s)". The TABBU was derived from the amount of trimmed and boneless beef is produced by one beef cow, based on academic research done for the beef industry found [here](#), and is set as equivalent to 500 lbs. The app pulls player weight data from the Fox Sports API, an example of which can be found [here](#), and uses the total weight of each team's starting lineup, including the rolled-up weights of starting defenses, to give each team a total TABBU score.

Weekly Top Scorers

Running list of each week's highest scoring team. Can be used for weekly highest points payouts.

Weekly Highest Coaching Efficiency

Running list of each week's team with the highest coaching efficiency. Can be used for weekly highest coaching efficiency payouts.

COVID-19 Risk

The COVID-19 risk ranking is a "just-for-fun" metric that pulls NFL player transaction history from [USA Today Sports NFL player transactions list](#), and then assigns a risk factor to every player based whether or not that player is currently on the Reserve/COVID-19 list, whether or not that player has previously been on the Reserve/COVID-19 list, how many teammates of that player have been on the Reserve/COVID-19 list, and how recently the last teammate of that player was on the Reserve/COVID-19 list.
